

The check-in app that **can't** track your child: there is nothing in it that tracks.

A child gets five buttons. Their location is shared at the moment they press one, and at no other moment. There is no background location code in the app at all. After any check-in the child's own screen shows **exactly what their family sees**: same map pin, same delivery status, live. A child who can verify what left their phone keeps carrying the phone. That trust is the safety mechanism.

The five check-ins. The fourth is the quiet exit ramp: a parent rings with a reason to leave. The fifth reaches every guardian and keeps alerting until a person answers.

NEVER

- ✗ Background location, geofences, live tracking
- ✗ App-usage or "did they read it" reporting
- ✗ Advertising, analytics SDKs, data sales
- ✗ Emergency-service claims: the app teaches every child at setup that emergencies are for 999

ALWAYS

- ✓ The child presses the button, every time
- ✓ The child sees who receives, and what they see
- ✓ Location deleted after 30 days; honest delivery status on the child's own screen
- ✓ Every safety feature free for one child and two guardians, forever

PRICE

Free

Sotto Family: £2.49/mo
or £24.99/yr adds room,
